

# AI tools in programming

Scientific workflows: Tools and Tips 

Dr. Selina Baldauf

2024-01-18

# What is this lecture series?

## Scientific workflows: Tools and Tips

 Every 3rd Thursday  4-5 p.m.  Webex

- One topic from the world of scientific workflows
- Material provided [online](#)
- If you don't want to miss a lecture
  - [Subscribe to the mailing list](#)

# Motivation

- AI tools assist programmers with
  - Coding
  - Debugging
  - Learning
  - ...
- Higher productivity and efficiency
- More motivation

# Overview of tools

- Browser-based chat bots ([ChatGPT](#), [Bard](#), ...)
  - General-purpose
- Data-analysis tools (Data analyst GPT, [RTutor](#), ...)
  - Upload data and ask questions about it
  - Download the code that was used for the results
- Integrated AI tools ([GitHub Copilot](#), [Codium AI](#), ...)
  - Integrated directly in programming environment
  - Real-time suggestions, chat, debugging, ...

# Today

- Focus on **integrated AI tools**
  - How to use GitHub Copilot to
    - Speed up your coding
    - Improve your code
    - Learn
- Concerns when using AI tools
- **Main goal:** Motivate you to try out tools and find out what fits your workflow
- Find other tools on the [website](#)

# Now You

- ? What is your main programming language
- ? Which IDE (programming environment) do you use
- ? Which AI tools for programming did you already try

# Integrated AI tools for programming

Mainly GitHub Copilot

# GitHub Copilot

- Cloud-based AI tool by Github and OpenAI
- Model based on GPT-4 and OpenAI's Codex
  - Specifically trained on source code
- Basic idea: Plugin for your IDE to integrate Copilot
- Works best for well-represented languages (Python, JS, ...)

# How to get GitHub Copilot

It's really easy, but you need:

- GitHub Account
- Active GH Copilot subscription (10\$ per month)
  - Get it for free as an academic with an educational account
- IDE that supports Copilot
  - Full support: Visual Studio (Code), Vim, Neovim, JetBrains IDEs (e.g. PyCharm)
  - Limited support: RStudio, ?

See [lecture website](#) for step-by-step guide and more information.

# Using GitHub Copilot

Demo of the main features and use cases

# Inline code suggestions

- Copilot tries to predict what you want to do next
- Suggestions are based on the context
  - Previous code
  - Comments
  - Variable and function names
  - ...

# Get better suggestions

- **Provide context**
  - Open other files
  - Add top level comments explaining the purpose of the script
  - Name variables and functions properly
  - Copy-paste sample code and delete it later
- **Be consistent**
  - “Garbage in, garbage out”
  - Have a nice and consistent coding style

Nice side effect of using Copilot: More good-practice coding

# Chat

- Ask and give commands regarding:
  - Highlighted lines of code
  - The whole script or project
- Preset commands starting with /
  - `/fix`: fix problems in your code
  - `/doc`: get documentation
  - `/explain`: explain this code
  - `/test`: write unit tests
  - `/new`: create new projects or scripts with code

# Codium AI as an alternative

- No inline code suggestions
- Great functionality to
  - Explain code
  - Suggestions improve and enhance code
  - Generate tests
- Not in RStudio, but in VS code and many other IDEs
- Free for personal use (for now)

# Concerns to consider

- Privacy
  - Chose whether your prompts and suggestions will be used by Github (Github -> Seetings -> Copilot -> Policies)
- Plagiarism
  - Block suggestions matching public code (Github -> Seetings -> Copilot -> Policies)
- Ethical concerns
  - For-profit tool trained on open-source
- Environmental concerns
  - Water and enery usage

# Usage guidelines

- No definite guidelines, but see examples on [lecture website](#)
- **Responsibility**
  - You are responsible for your scientific output
  - Stay critical, double-check
- **Transparency**
  - Make clear for which tasks you used which AI
- **Know relevant guidelines**
  - Journals
  - Your university
- Don't use AI in exams

# Summary

- AI tools for programming can be extremely useful
- Try different tools and find the ones you like
- Think about concerns
- Learn about relevant guidelines
- Development is fast, so keep up
- Check out the [lecture website](#) if you want to get started

# Next lecture

Topic t.b.a.

-  15th February  4-5 p.m.  Webex
-  Subscribe to the mailing list
-  For topic suggestions and/or feedback [send me an email](#)

# Thank you for your attention :)

Questions?

Thanks to Anne Lewerentz for support with the preparation.
